

Put C1 and C2 at the CC1101 VCC and GND pins.

ANT: 315 MHz antenna, or a 23.8 cm wire on modules with a solder pad.

CC1101 is 3.3 V only. Check the pin order against your module's silkscreen.

GDO0 and GDO2 are unused by the current sketches; wired for listening to the real remote.

USB-C powers the board and carries the serial console. Fit the Wi-Fi antenna the XIAO ships with.

Serial over USB-C, MQTT and REST over Wi-Fi. Not yet built.
